Alcatel-Lucent MDR-8000

2 GHz WCS DIGITAL RADIOS

OVERVIEW

The MDR-8X02 is Alcatel-Lucent's premier digital microwave radio for long-haul, point-to-point wireless communications. The flexible platform offers features designed to provide robust operation, while also reducing your total cost of ownership. With a common platform that supports virtually all frequency bands from 2–11 GHz, the MDR-8X02 operates in the 2.305–2.360 GHz WCS band. This radio offers customers transmission capacity from 4–16 DS1s and 10/100/1000 Base-T Ethernet, with the ability to upgrade capacity simply by changing Capacity Keys™.

By leveraging Alcatel-Lucent's superior technology in power amplifiers and using direct modulation, the MDR-8X02 improves overall system quality. It also utilizes existing infrastructure with the WCS spectrum. In many cases, the MDR-8X02 enables 2.4 GHz spread-spectrum users and/or 2.1 GHz licensed users to upgrade radio capabilities without touching the tower, antenna, or transmission line. In new designs, lighter antennas and the use of coax minimize overall system costs. Compact mechanical dimensions and low power consumption allow operators to place the MDR-8X02 in cramped spaces without sacrificing system performance and availability.
